

WHAT IS CLAIMED IS:

1. An audio and video combined apparatus wherein a housing includes a plurality of apparatuses, an operating device constituting said apparatus is mounted on a board, and an operating device generating a noise is positioned between a panel of said housing and a chassis forming said apparatus and is thus shielded electromagnetically.

2. An audio and video combined apparatus wherein a housing includes a plurality of driving decks and operating devices corresponding to various recording media, and a power device, and said operating devices and said power device are mounted on a board, said board is provided between said housing and at least one of said driving decks, and an operating device generating a noise is surrounded by a panel of said housing and a chassis of said driving deck and is thus shielded electromagnetically.

3. An audio and video combined apparatus wherein a housing includes a DVD deck, a video cassette deck, a DVD operating device, a video cassette operating device and a power device, both of said operating devices and said power device are mounted on at least one double-sided board, said double-sided board mounting said DVD operating device is provided between said housing and said video cassette deck, and a circuit generating a noise in said DVD operating device is positioned below said video cassette deck, and is surrounded by a conductive panel of said housing and a conductive chassis of said video cassette deck

and is thus shielded electromagnetically.
